## Font Installation Instructions

To use the key files to install the font, you must first open Font Designer. Click on Start, Programs, Omega and then click on Font Designer. Once you are in Font Designer click on File then click on Set Directory. Then browse to where you saved the Key files. Select the folder containing the key files, then click on File, then Font Settings. In the top space you enter the name of the font, I recommend using the name I have given the font however you can name it as you desire. Set the cap height to 1.0, then click in the space character box, the value will change automatically. Click on OK, click on Setup. Click on process, then click on process again and it should say font construction complete. If you have any questions feel free to call.
